

JP Multi Plug Solder Station

Thank you for purchasing the JP Multi Plug Solder Station. When it comes to soldering the best joints are always made when your work is clamped and heat insulated and, where plugs and connectors are concerned, this tool satisfies both criteria. There are several makes of connector on the market and all slightly differ in size. As a result the jig has been designed to accommodate all known sizes. Simply push the smaller connector types further into the slot to hold firmly.

Parts

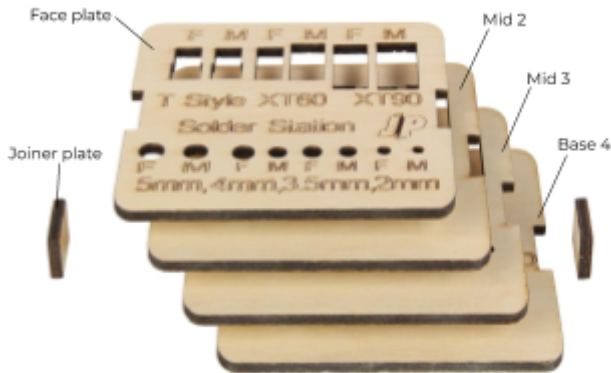

In the bag you will find:

1x Face plate

1x Centre plate and joiner plate (Mid 2)

1x Centre plate and joiner plate (Mid 3)

1x Base plate (Base 4)

Assembly

1. Remove the pop out joiner pieces from the Mid 2 and Mid 3 plates.
2. Use white glue (not cyano) to glue the Face plate, Mid 2, Mid 3 and Base 4 together (see above).
3. Glue the joiner plates into the left and right side keyway slots.
4. Ensure everything is aligned, remove any glue that may have seeped into the connector apertures, clamp and leave to dry.
5. Enjoy hassle-free soldering of all your connectors.
